BbLearn

BbLearn is the University of Idaho’s learning management system for use with face to face, hybrid, and online courses. The staff at the Center for Excellence in Teaching and Learning (CETL) are happy to assist you in developing course spaces for your classes.

Getting Started

- Watch BbLearn Essentials Video (7.5 min)
- Login here: http://bblearn.uidaho.edu
- Turn Course On for student access
- Request help with Course Design
- Go to BbLearn Instructor Help

Syllabus

Please refer to CETL’s syllabus checklist as you create your own course syllabus. Post your syllabus in BbLearn to give students 24/7 access to it throughout the semester.

Assignments

Use the BbLearn Assignment tool to create clear and transparent assignments. This tool allows students to submit their work through BbLearn for you to grade. It also allows you to deliver formative or summative feedback back to your students via narrative and/or rubric.

Discussions

BbLearn has a variety of communication tools—the most common of which is the discussion board. You may use this to provide a way for students to interact with each other in face to face, hybrid, or fully online courses. Visit the CETL staff for information on interactive practices and moderating skill tips!

Grade Center

Assessment is an integral piece of giving feedback to students. The Grade Center is a powerful tool which allows you to manage the course grades and display them to students throughout the semester. CETL offers assistance on all aspects of the grade center. Contact us whenever you need help.

ORIENTATION Q&A

- The UI no longer offers a Scantron service. However, there are online services that offer this service (e.g. Zipgrade, Quickkey). (Note: BbLearn has capability to do online testing.)
- Print quota info for student labs
- BbLearn offers two Mobile App options—one specifically written for instructors and the other for students. Grading via a BbLearn Mobile is currently not a provided option. We do not recommend quizzes & tests be taken via BbLearn Mobile.
