Updating Your Audio and Video Drivers

Mac OS

Following these steps will update all operating system and driver software. Updated software and drivers will allow your system to run more smoothly with fewer compatibility issues.

Make sure you are connected to the internet. Click on the Apple icon in the upper left corner of your screen. This will pull down a menu.

Click on “Software Update” from the menu.
Your system will check for any software updates.

If updates are available, they will appear in this window. Check the boxes for any updates that need installing. Make sure you install any updates to your Mac OS. Click the blue “Install” button in the lower right corner.

While the software is downloading, you will see a window like the image on the right.
Once the update is downloaded, you may be required to restart your computer. If you are prompted to do so, click the blue “Restart” button in the window.

If you downloaded updates, it is recommended to repeat the Software Update steps again in case there are additional updates. Once you receive a window stating “Your software is up to date”, you have downloaded and installed all updates that are available. Click the “Quit” button.
