University Committee on General Education

Proposed Catalog Changes

Effective Term (unless otherwise noted) = Summer 2016

1. Add the following course

**CORS 232 Science on Your Plate: Food Safety, Risks and Technology (3 cr)**
Short Title: SCIENCE ON YOUR PLATE
Introduction of food science; food, diversity, and culture; historical events influencing food choices; principles of foods safety; principles of processing, preservation, and preparation; application of science and technology to various food products; and discussion of current issues related to food and health.

Available via distance: No
Geographic Area Availability: Moscow
Rationale: CORS 208 is currently dormant, but was taught Fall 2014, and is currently being taught Fall 2015. It is critical that Science on Your Plate be brought out of dormancy because this course provides an important service to the University by providing a popular CORS course with consistently high enrollment. This course will continue to be offered in the future if brought out of dormancy. At this time these changes have been approved by the UCGE (11/19/15).

Assessment will be completed through weekly quizzes, two exams, assignments, and a comprehensive final.
