RE: Prerequisites Omitted from Degree Requirements

DATE: April 8, 2020

Departments have been working with the Provost's office to develop four-year degree maps for the majors that they offer. This process has allowed departments to identify some prerequisites that were inadvertently omitted or not included within their major requirements. The Registrar's Office is requesting permission to add these necessary courses to majors that have already passed through the UCC approval process with these omissions.

Any course(s) added to a curriculum would be necessary for the students to complete in order to meet major requirements. This is particularly important in cases where a lower-level prerequisite is necessary for the student to progress in the major. Adding these courses to the major requirements list allows the actual curriculum load to be transparent for students considering their academic plans.

These changes would be made in the 2020-2021 catalog and reflect the four-year plans that are being provided to the Provost's office by April 15.
