Grading matrix for final project NR402			
The final report should be an example of how GIS analysis methods can be applied in natural resource applications, using your own or other data. It is expected to be 3-4 double-spaced written pages accompanied by at least one map and appropriate tables and/or graphs.			
		points (1-5)	Comment
GIS Analysis			
Complexity and applicability of GIS methods			
Were relevant and logical data used?			
Were scale and accuracy issues addressed?			
Maps			
Are required map components present and correct; map, legend, scale bar, north arrow, title, data source, locator map (if appropriate)			
Map composition and general appearance			
Writing			
Report organization (background, objectives, methods, results for example)			
Professional writing style, spelling and grammar			
Citations			
Correct citations of GIS data sources and literature references			
Sum (max is 40 points)
